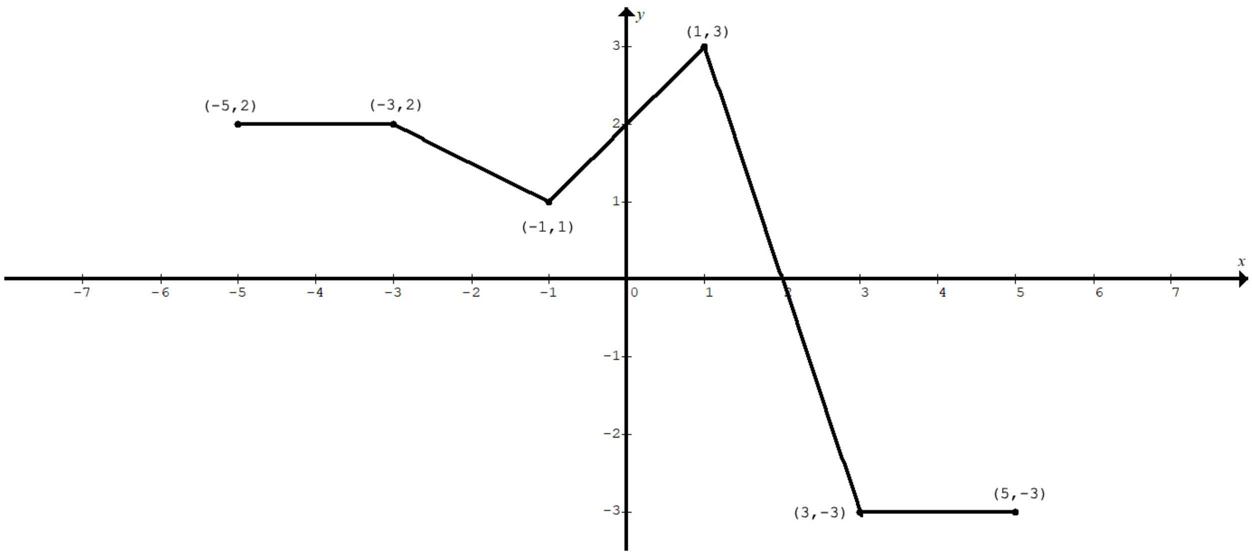
QUESTION SHEET

PLEASE PUT ALL WORK AND ANSWERS ON THE ANSWER SHEET. PLEASE DO NOT HAND IN THE QUESTION SHEET.



1. The graph of the function f above consists of three line segments.

Let g be the function given by $g(x) = \int_{-1}^{x} f(t)dt$

A. Find $g(2)$, $g'(2)$, and $g''(2)$.

B. On what interval between $-5 < x < 5$ is g increasing? Justify your answer.

C. For what values of x is $g(x)$ concave downward? Justify your answer.

D. Write the equation of any horizontal tangents to $g(x)$ between $-5 < x < 5$.

E. Find the absolute minimum value of $g(x)$ on the interval $-5 \le x \le 5$. Justify your answer.

F. Find the average rate of change of $g'(x)$ on $-5 \le x \le 5$. Does the Mean Value Theorem applied on the interval $-5 \le x \le 5$ guarantee a value of c, for $-5 < c < 5$, such that $g''(c)$ is equal to this average rate of change $g'(x)$? Why or why not? If so, find a value of c that satisfies the conclusion of the mean value theorem.

G. Find the average value of $f(x)$ on $-5 \le x \le 5$. Does the Mean Value Theorem applied on the interval $-5 \le x \le 5$ guarantee a value of z, for $-5 < z < 5$, such that $f(z)$ is equal to this average value of $f(x)$? Why or why not? If so, find a value of z that satisfies the conclusion of the mean value theorem.

H. Let $h(x) = 2x^2 - \int_{-1}^{x} f(t)dt$. Find $h'(3)$.

I. Let $p(x) = \int_{-1}^{4x^3+2} f(t)dt$. Find $p'(-1)$.

x	-5	-2	-1	0	2	7	8
$f(x)$	-10	-3	4	8	14	12	10

2. $y = f(x)$ is a continuous and differentiable function. Select values for $f(x)$ are given in the table above.

Let $g(x) = \int_0^x f(t)dt$ for $-5 \le x \le 8$.

A. Estimate $g(8)$ using a right Riemann sum with three rectangles.

B. Estimate $g(-5)$ using a trapezoidal approximation with three trapezoids.

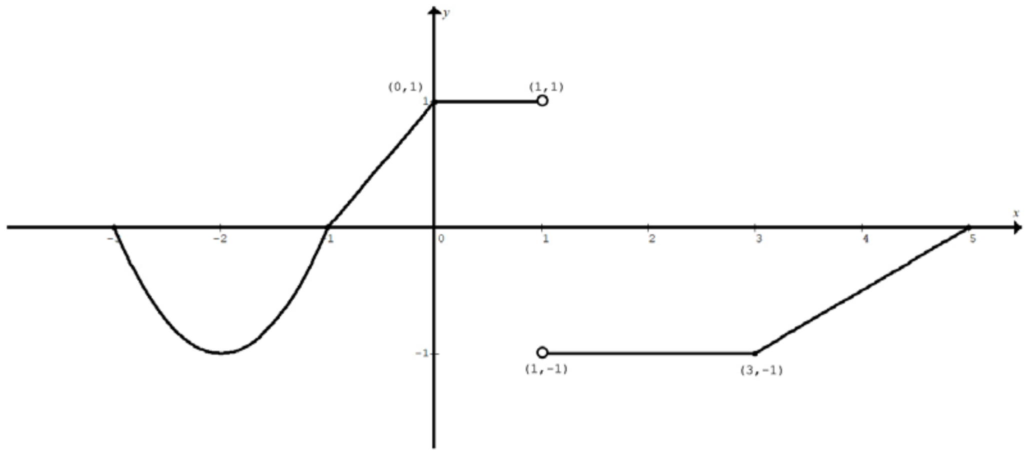
C. Find $g'(-1)$

D. Estimate $g''(2.6)$.

E. If $m(x) = \int_0^{1-\ln x} f(t)dt$, find $m'(e)$.

F. If $b(x) = g\left(\frac{x}{4}\right)$, find $b'(8)$.

G. What is the minimum number of times that $f'(x) = 0$ on $-5 \le x \le 8$. Make use of the appropriate theorems to justify your answer.



3. Above is the graph of $y = f^{/}(x)$. This derivative graph consists of the parabola $y = x^2 + 4x + 3$ on $-3 \le x \le -1$ and a series of line segments on $-1 \le x \le 5$.
The graph of $y = f(x)$ (whose graph is NOT shown) is continuous on $-3 \le x \le 5$.
Suppose that $f(0) = 12$.

A. The graph of $y = f(x)$ is decreasing for what *x*-values?
B. Compute $f(5)$ and $f(-3)$
C. Find the absolute maximum and absolute minimum values of $f(x)$ on $-3 \le x \le 5$. Justify your answers.
D. Find $\lim\limits_{x \to 0} \dfrac{f(x) - 12}{1 - \ln(x + e)}$ Show work.
E. Find $\lim\limits_{x \to 1^+} \dfrac{f^{/}(x) + x}{x^2 - 1}$ Show work.

AB.Q403.REVIEW ASSESSMENT (PART B)

QUESTION 1

A. Find $g(2)$, $g^{/}(2)$, and $g^{//}(2)$.

B. On what interval between $-5 < x < 5$ is g increasing? Justify your answer.

C. For what values of x is $g(x)$ concave downward? Justify your answer.

D. Write the equation of any horizontal tangents to $g(x)$ between $-5 < x < 5$.

E. Find the absolute minimum value of $g(x)$ on the interval $-5 \le x \le 5$. Justify your answer.

F. Find the average rate of change of $g'(x)$ on $-5 \le x \le 5$. Does the Mean Value Theorem applied on the interval $-5 \le x \le 5$ guarantee a value of *c*, for $-5 < c < 5$, such that $g''(c)$ is equal to this average rate of change $g'(x)$? Why or why not? If so, find a value of *c* that satisfies the conclusion of the mean value theorem.

G. Find the average value of $f(x)$ on $-5 \le x \le 5$. Does the Mean Value Theorem applied on the interval $-5 \le x \le 5$ guarantee a value of *z*, for $-5 < z < 5$, such that $f(z)$ is equal to this average value of $f(x)$? Why or why not? If so, find a value of *z* that satisfies the conclusion of the mean value theorem.

H. Let $h(x) = 2x^2 - \int_{-1}^{x} f(t)dt$. Find $h'(3)$.

I. Let $p(x) = \int_{-1}^{4x^3+2} f(t)dt$. Find $p'(-1)$.

QUESTION 2

A. Estimate $g(8)$ using a right Riemann sum with three rectangles.

B. Estimate $g(-5)$ using a trapezoidal approximation with three trapezoids.

C. Find $g'(-1)$

D. Estimate $g''(2.6)$.

E. If $m(x) = \int_0^{1-\ln x} f(t)dt$, find $m'(e)$.

F. If $b(x) = g\left(\frac{x}{4}\right)$, find $b'(8)$.

G. What is the minimum number of times that $f'(x) = 0$ on $-5 \le x \le 8$. Make use of the appropriate theorems to justify your answer.

QUESTION 3

A. The graph of $y = f(x)$ is decreasing for what x-values?

B. Compute $f(5)$ and $f(-3)$

C. Find the absolute maximum and absolute minimum values of $f(x)$ on $-3 \le x \le 5$. Justify your answers.

D. Find $\lim_{x \to 0} \frac{f(x)-12}{1-\ln(x+e)}$ Show work.

E. Find $\lim_{x \to 1^+} \frac{f'(x)+x}{x^2-1}$ Show work.
